Professional Summary

Adaptable Computer Science graduate and Technical Writer combining full-stack application development with technical writing expertise. Experienced in bridging complex software architectures and developer documentation within Agile squads. Passionate about optimizing CI/CD pipelines, authoring REST APIs, writing test-driven code, and deploying automated container infrastructure.

Skills

Programming Languages: Java, Kotlin, JavaScript (ES6+ ESM), TypeScript, HTML5, CSS3, Python, SQL
Frameworks & Libraries: React 18, Vite, Next.js, Node.js, Express.js, Web Audio API, Service Workers (PWA), REST APIs
DevOps, Cloud & Testing: Kubernetes, Docker, FluxCD, Kustomize, GitHub Actions CI/CD, Cloudflare Workers, Tailscale, Vitest, A11y

Education

Western Governors University – Bachelor of Science, Computer Science May 2026
Multiverse Bootcamp – Computer Software Engineering Sept 2024 – Sept 2025
Altcademy – Course in Full Stack Web Development Apr 2024

Experience

Technical Writer, Clover Network, LLC – Sunnyvale, CA Sept 2024 – Present

- Engineered technical documentation and API integrations, accelerating engineering onboarding for mobile SDKs and core e-commerce modules.
- Architected custom verification scripts using GitHub Actions, establishing CI guardrails that enhanced platform integrity by 95%.
- Collaborated with cross-functional Agile engineering teams to guarantee feature accuracy, accelerate validation lifecycles, and streamline communication.
- Spearheaded legacy resource migration into git-backed architectural targets, enabling modern version control and high-quality peer review workflows.

Laboratory Technician, UL Solutions – Fremont, CA Apr 2022 – Sept 2024

- Conducted Energy Star efficiency, thermal, and power-consumption testing on enterprise server blades and hardware for Apple, Google, HP, Dell, and Microsoft.
- Executed photometric, electrical, and thermal safety testing on commercial lighting products under UL 1598, UL 8750, and LM-79 standards.
- Operated automated data acquisition systems and environmental chambers under ISO 17025 guidelines, logging test matrices and compiling reports in LIMS.

Projects

SortiePrep – Interactive Flight & Cockpit Simulator sortieprep.com

- Architected a PWA flight simulator serving 100+ monthly active users across iOS, Android, and desktop with Service Worker offline caching.
- Developed an event-driven state engine in ES6+ JS to model real-time avionics, procedural checklists, and spatial Web Audio synthesis.
- Built serverless presence APIs with Cloudflare Workers and created automated ESM, DOM, and accessibility (a11y) smoke test suites.

GitOps Cloud Infrastructure Home Lab Jan 2026 – Present

- Provisioned an immutable bare-metal Kubernetes deployment on Talos Linux, optimizing local compute budgets and host parameters.
- Architected an automated GitOps deployment engine leveraging FluxCD and Kustomize declarations for continuous container web app deployment.
- Integrated a private LLM subsystem (LM Studio), cloud observability, CronJob backups, and an encrypted Tailscale zero-trust mesh.

Front-End Portfolio Application antonymperez.com

- Architected a responsive Single-Page Application (SPA) using React 18, Vite, ES6+, and CSS Modules for enterprise-grade front-end performance.
- Built automated CI/CD deployment pipelines via GitHub Actions to deploy static builds to GitHub Pages with automated linting guardrails.
- Optimized core web vitals and bundle size using Vite code-splitting, tree-shaking, fast asset compilation, and mobile-first responsive design.
